Memberships

AAO and WFO active member

About BRAVA⁺

BRAVA⁺ independent movers are a new way to move teeth. It's a custom-made device that consists of a rigid bar that sits on the gingiva and flexible arms that connect it to each tooth. These arms act as springs and move the teeth from the original position to the final position approved by the orthodontist.

Brava Independent Movers are completely invisible because they are placed lingually. Not only does Brava stand apart from other aesthetic treatment options, it works continuously and predictably, providing a hassle-free solution for patients on the go.
